TACIT REAL RETURN STRATEGY

AS AT 31 MARCH 2026

INVESTMENT OBJECTIVE

The investment objective is to maintain the capital value of the portfolio in real terms over an investment cycle. The Tacit Real Return Strategy is designed for an investor with a time horizon of more than 5 years, and a tolerance for risk that can accept variations or disruptions to capital value or current income in order to achieve their longer-term objective.

Within the Tacit Real Return Strategy, we would expect to maintain approximately one-half of your funds in growth or real assets such as equities, property and commodities, which may exhibit higher short term volatility, when compared with lower risk asset classes.

This weighting to growth assets can be tactically adjusted to take account of prevailing market conditions but we would not expect this to exceed 65% for a prolonged period at any time.

SUITABILITY

This portfolio may be suitable for investors looking to avoid inflation eroding their capital, but who also seek to mitigate short-term risks or fluctuations in capital values that could lead to capital losses over the longer term. The aim is to achieve an inflation-beating total return in their portfolio over five years or longer.

KEY RISKS

+ Interest rates rise
+ Inflation outstrips the return achieved
+ Capital losses can be experienced

PORTFOLIO HOLDINGS

		% OF TOTAL ASSETS
1	AMUNDI US TIPS GOVERNMENT INFLATION LINKED BOND ETF	10.0%

IMPORTANT INFORMATION: Past performance cannot be relied upon as a guide to future performance. The actual values of your investment and the income returns generated from your investments may vary, and your initial investment amount cannot be guaranteed. Exchange rates may cause the value of overseas investments to rise or fall. Individual investors may realise returns that are different to the strategy performance.

Source for performance: Returns presented are based on the model portfolio held directly with Tacit Investment Management. Where the model portfolio is being accessed through an external platform, the underlying investments may differ due to fund and share class availability. Performance is calculated through Morningstar Direct on a total return basis, with income reinvested net of UK tax. All performance figures shown are net of underlying funds' ongoing charges (OCF) and net of Tacit Investment Management DFM and AJ Bell Securities Ltd custody fees, but gross of any investment advice fees or adviser charges. Deduction of these fees and charges will impact on the performance shown and will have the result of reducing the illustrated performance. Please refer to your investment adviser or Financial Adviser for details. Charges are calculated at a rate of 0.57% from inception until 16th June 2019 and then at a rate of 0.55% thereafter. Past performance is intended as a guide only and the returns shown may not be the same as the returns of an investor's actual account and this due to various factors including the investment date by the investor and differences across platforms. All figures are in GBP Sterling terms. Benchmark performance is shown for comparison purposes only and are calculated on a total return basis. Due to the delay in the announcement of the monthly CPI data, the CPI figure for the current month has assumed to be flat and the CPI target has been calculated using the previous months figure.
